

TOTEM Results from 2010

Simone Giani
on behalf of the TOTEM Collaboration

TOTEM Physics Overview

Total cross-section

Elastic Scattering

Forward physics

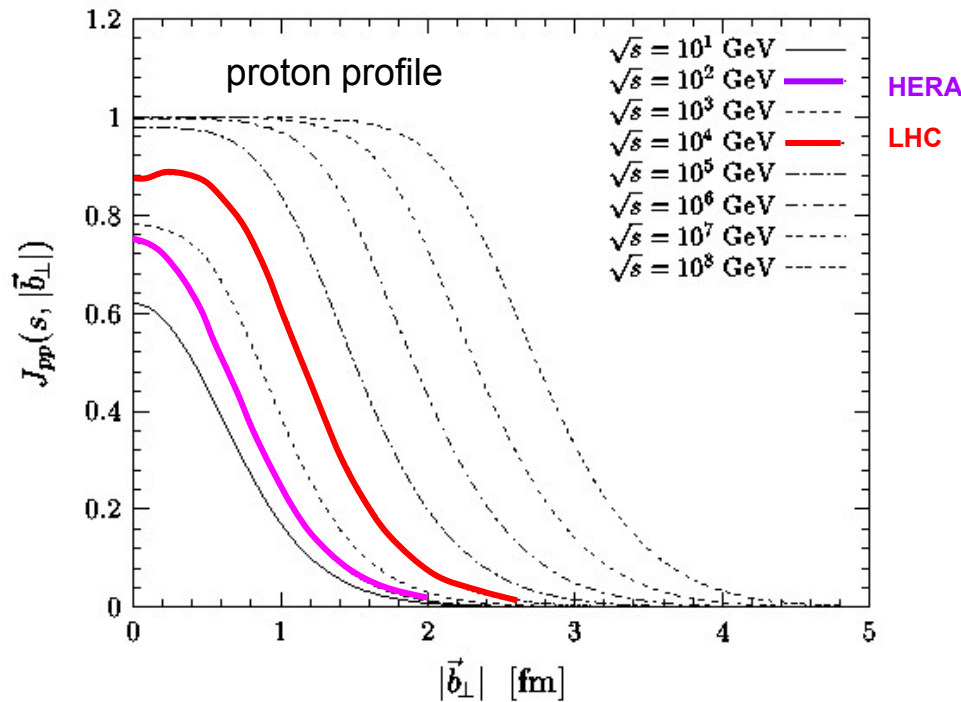

Diffraction: soft and hard

The proton structure

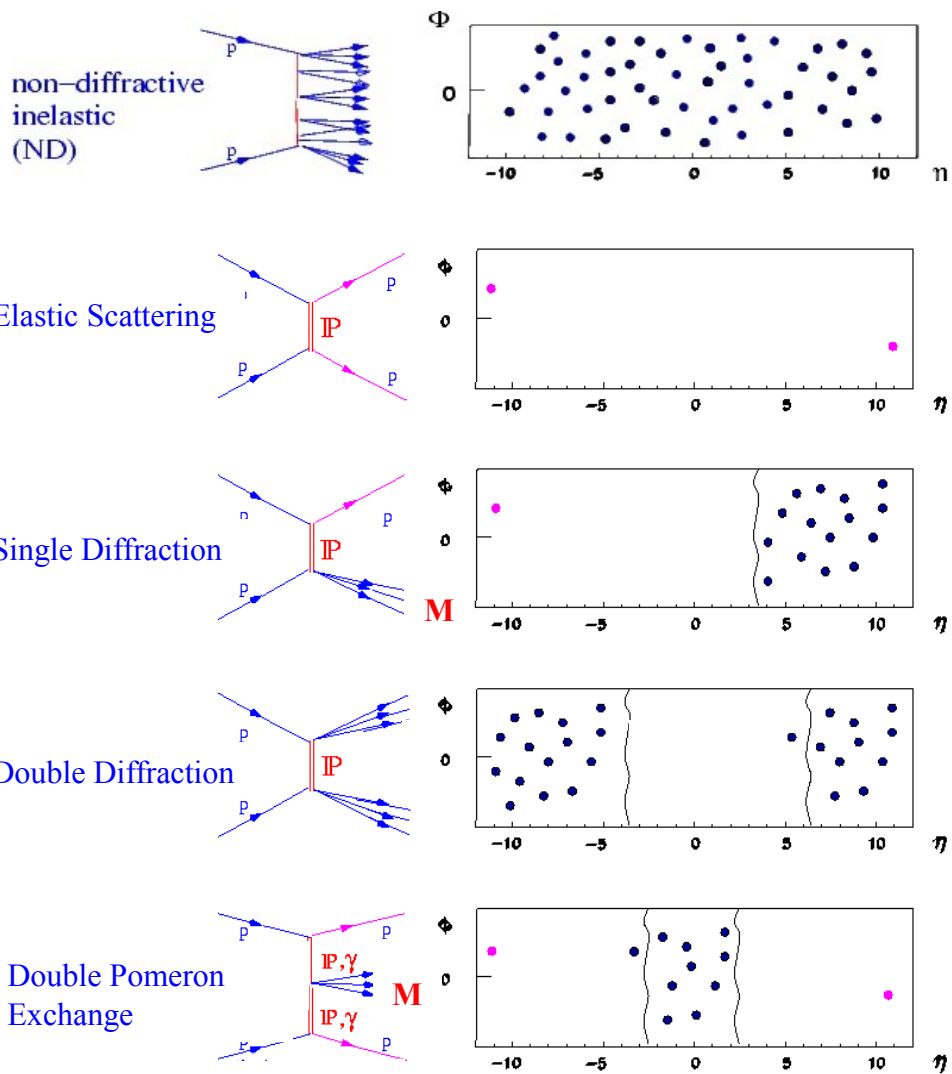

blacker
radius increases
edge area increases

Total cross-section

Dominant Event Classes in p-p Collisions

$$\eta = -\ln \tan \theta/2$$

The TOTEM detector set-up

Roman Pot Unit

Run Overview

RP position		int. Lumi	Physics
vertical	horizontal		
25 σ	30 σ	1.5 nb ⁻¹	first 2 elastic candidates
20 σ	25 σ	185 nb ⁻¹	100 elastic events at $\sim 2.3 \text{ GeV}^2 < t < 3.5 \text{ GeV}^2$
18 σ	20 σ	3867 nb ⁻¹	$\sim 10 \text{ k}$ elastic events at $\sim 2.1 \text{ GeV}^2 < t < 3.5 \text{ GeV}^2$
7 σ	16 σ	9.5 nb ⁻¹	TOTEM dedicated run: 1 pilot bunch (1e10 p/b) + 4 bunches (7e10 p/b) <ul style="list-style-type: none">– 80 k elastic events at $\sim 0.4 \text{ GeV}^2 < t < 2.8 \text{ GeV}^2$– pileup-free T2 data– diffractive physics with RP and T2

Track map (side 4,5) for left right coincidences

Collinearity in $\theta_{x,56}^*$ and $\theta_{y,56}^*$

Low ξ :
 $|x| < 0.4$ mm

Compatible with the
beam divergence

Elastic scattering – from ISR to Tevatron

Diffractive minimum: analogous to Fraunhofer diffraction: $|t| \sim p^2 \theta^2$

- exponential slope B at low $|t|$ increases
- minimum moves to lower $|t|$ with increasing s
 → interaction region grows (as also seen from σ_{tot})
- depth of minimum changes
 → shape of proton profile changes
- depth of minimum differs between pp , $p\bar{p}$
 → different mix of processes

Preliminary t-distribution

~ 84K elastic scattering candidate events TOTEM special run ($\sim 9 \text{ nb}^{-1}$)

$\sqrt{s} = 7 \text{ TeV}$

$\beta^* = 3.5 \text{ m}$

RPs @ 7σ (V) and 16σ (H)

“Raw” distribution:

- No smearing corrections
- No acceptance corrections
- No background subtraction

Syst. error sources under study:
alignment, beam position and
divergence, background,
optical functions, efficiency, ...

Track distribution for an inclusive trigger (global “OR”)

$$\xi = \Delta p / p$$

Double Pomeron Exchange (DPE)

$$\eta = -\ln \tan \theta/2$$

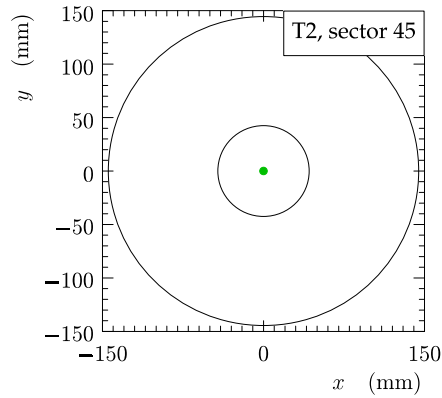

USE the LHC as a Pomeron-Pomeron (Gluon - Gluon) Collider

Double Pomeron Exchange

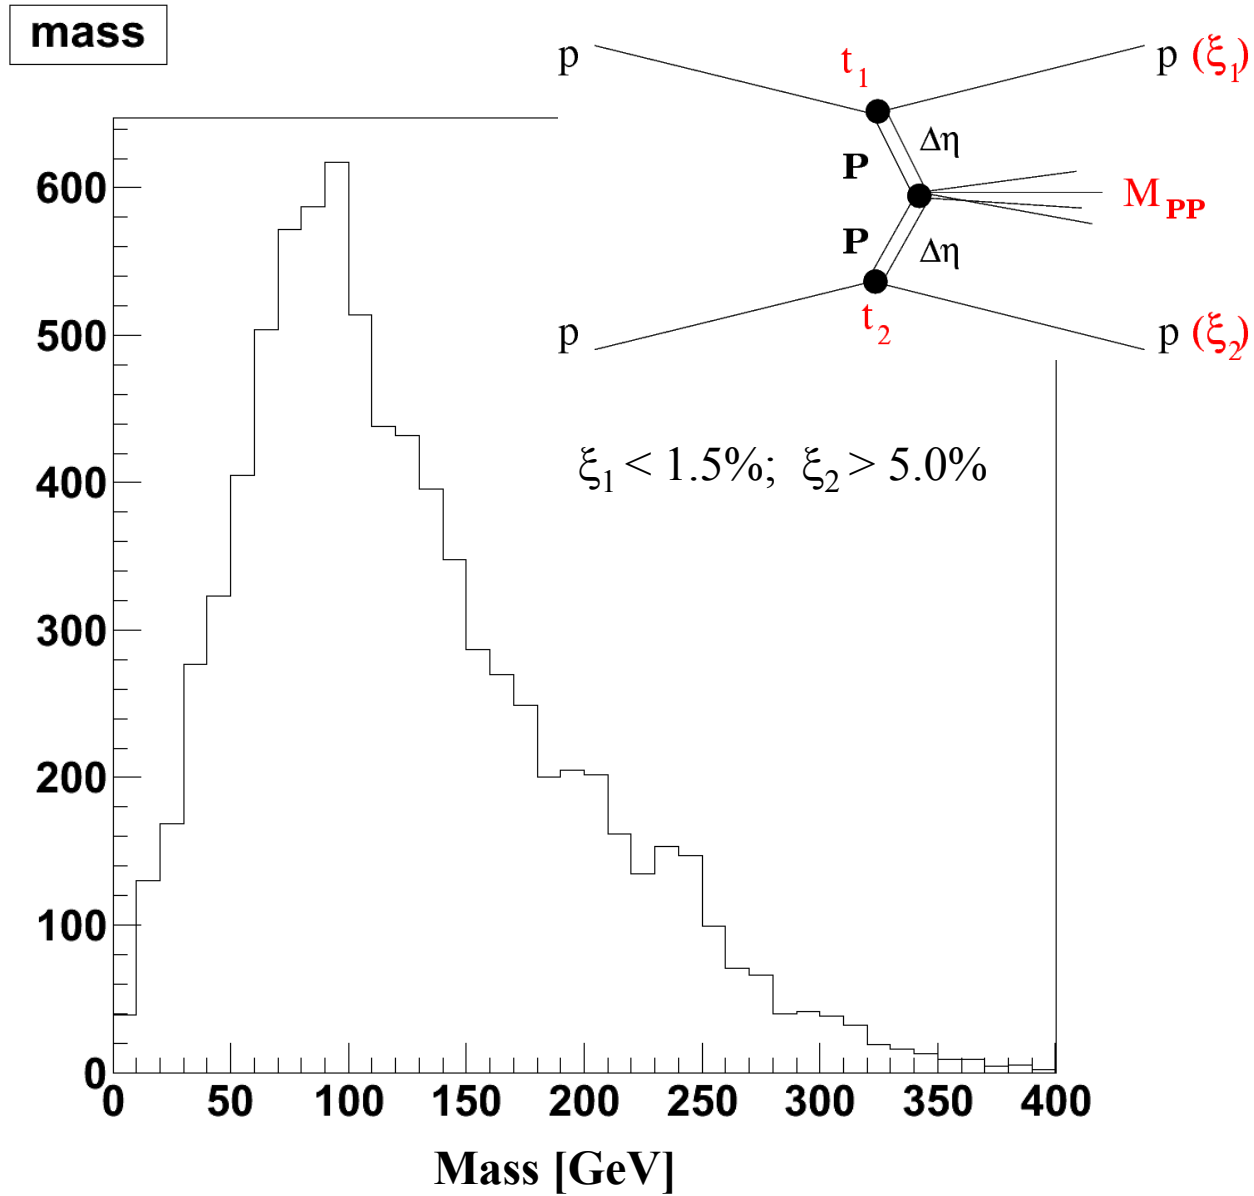

correlation between leading proton and forward detector T2

run: 37220007, event: 9904

Under Work: DPE Mass Reconstruction

Single diffraction low ξ

Correlation between leading proton and forward detector T2

run: 37280003, event: 3000

Single diffraction large ξ

correlation between leading proton and forward detector T2

run: 37280006, event: 9522

Next Year:

Measurement of the Total Cross-Section
