## Studies of hadronic B decays with early LHCb data

Aurélien MARTENS  
(LAL - Univ. Paris Sud 11 - Orsay)  
On behalf of the LHCb Collaboration

*Full fit :*

CKMfitter :  $\gamma = (67.2 \pm 3.9)^\circ$

UTfit :  $\gamma = (65.6 \pm 3.3)^\circ$

Loop constraints are more precise than tree ones.

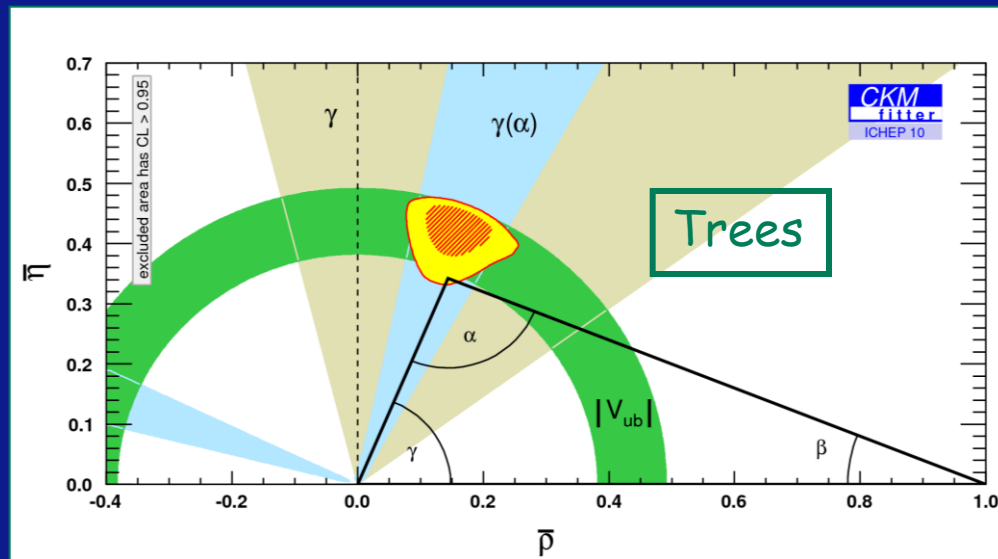

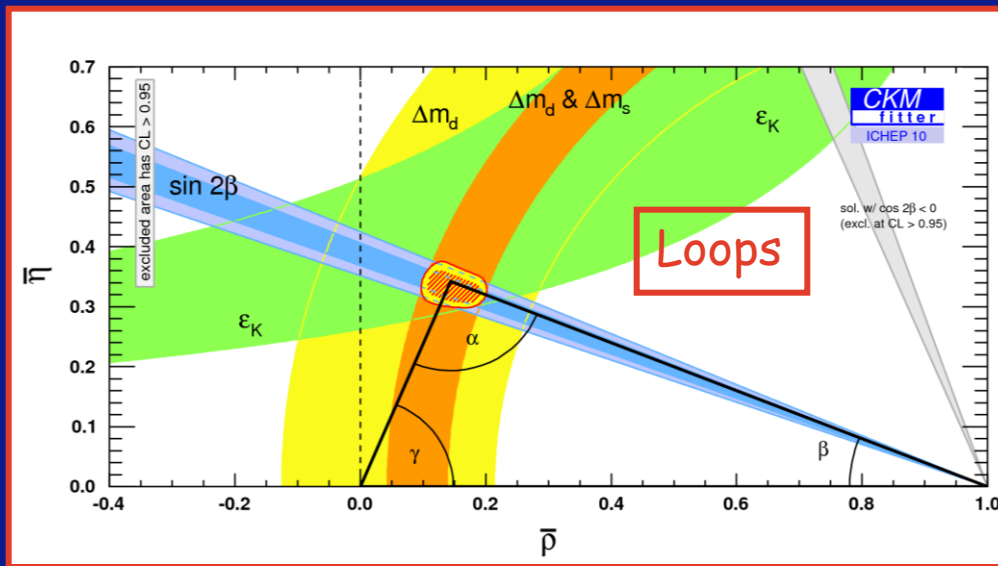

Good agreement with some small tension

*Direct measurements :*

CKMfitter :  $\gamma = (71 \pm 23)^\circ$

UTfit :  $\gamma = (78 \pm 12)^\circ$

Interest in more precise direct measurements

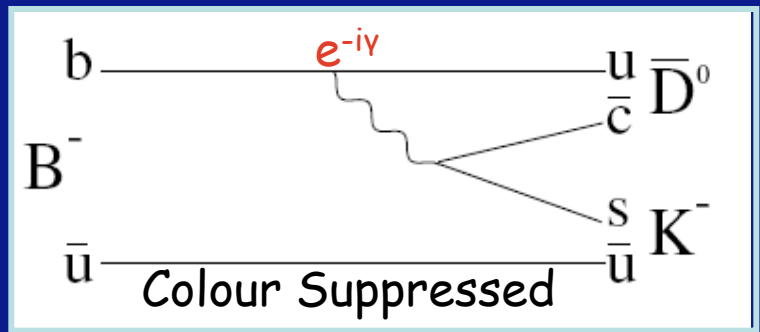

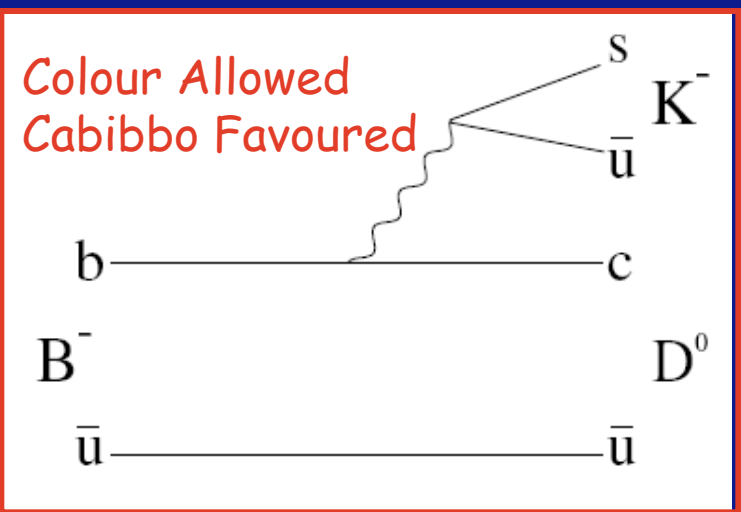

CKMfitter Group (J. Charles et al.), EPJC41, 1-131(2005),  
 Bona et al. (UTfit Collaboration), JHEP 0507 028(2005)

- Current direct determination of  $\gamma$  is mainly dominated by Dalitz measurements in  $B \rightarrow DK$ ,  $D \rightarrow K_s hh$
- There are two direct ways to access the CKM angle  $\gamma$ 
  - In tree diagrams :  $B \rightarrow DX$  decays
    - Time integrated
    - Time dependent
  - In loop diagrams :  $B \rightarrow hh$  or  $hhh$  charmless decays
    - Assumes U-spin to extract  $\gamma$
  - All of these accessible with unprecedented precision at LHCb
- Precise measurements of direct, mixing induced and interferences induced CPV
- Measurements within Standard Model channels and new physics polluted ones
  - uncover new physics contributions in loops
    - by comparing it with trees
    - By comparing with global fit

Roadmap for selected key measurements of LHCb, [arXiv:0912.4179v2](https://arxiv.org/abs/0912.4179v2)

- o An ideal Standard Model candle
  - ▣ Tree diagrams  $\rightarrow$  no contribution from new physics in B decays
  - ▣ Neglect D mixing : dominant bias but still negligible ( $\sim 1^\circ$ )
  - ▣ Neglect CPV in D decays : negligible contribution
  - ▣ Absolute relative theoretical uncertainty (EW corrections) :  $\Delta\gamma/\gamma \sim 10^{-6}$

$b \rightarrow u$  and  $b \rightarrow c$  transitions interfere

$D^0$ 's reco. in the same final state :  
 CP eigenstate  $KK, \pi\pi$  [GLW]  
 2 bodies & al.  $K\pi, K\pi\pi^0, K3\pi$  [ADS]  
 Dalitz  $Kshh$  [GGSZ]

	BR	$r_B$
$B^+ \rightarrow D^0 K^+$	$(3.7 \pm 0.3) 10^{-4}$	0.1
$B^0 \rightarrow D^0 K^{*0}$	$(4.2 \pm 0.6) 10^{-5}$	$\sim 0.3$

ADS : CLEOc constraints on D decay

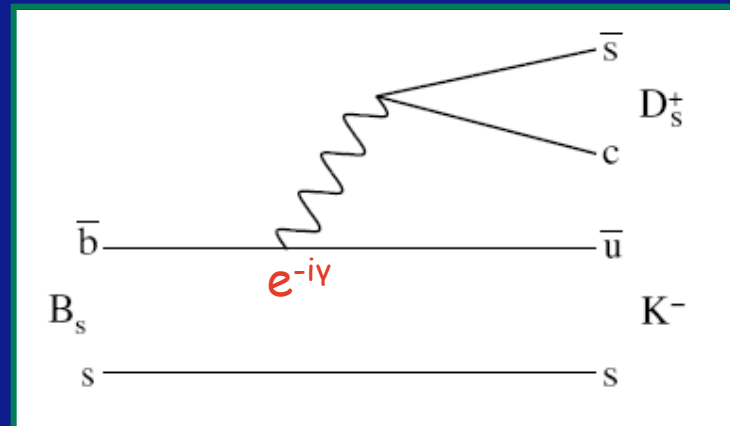

Extensions :  
 $D^0 K\pi$  Dalitz analysis with higher statistics  
 $B_s \rightarrow D\Phi$  integrated-untagged measurement

ADS [PRL 78 3257(1997); PRD 63 036005(2001)], GLW [PLB 253 483(1991); PLB 265 172(1991)], GGSZ [PRD 68 054018(2003)]

- An additional information from time dependent measurements
  - Measure  $\gamma + \Phi_M \rightarrow$  need an external model independent measurement of the mixing phase
  - Benefits from non vanishing lifetime differences [☺ for  $B_s$ , ☹ for  $B_d$ ]

MIXING

	BR	$\times [R]$	angle
$B_s \rightarrow D_s^+ K^-$	$(3.0 \pm 0.7) 10^{-4}$	0.4	$\gamma + \Phi_s$
$B_d \rightarrow D^+ \pi^-$	$(2.7 \pm 0.1) 10^{-3}$	0.02	$\gamma + 2\beta$

Simultaneous U-spin based extraction :  
 resolve 8-fold ambiguities (degenerated at low statistics) in  $B_d \rightarrow D^+ \pi^-$

Aleksan & al. [ZPC 54 653(1992)], Dunietz & al. [PRD 37 3186(1988) ; 39 3515E(1989)], Dunietz [PLB 427 179(1998)]

## Inclusive $B \rightarrow hh$ or $hhh$ analyses

- ❑  $b \rightarrow u$  involved in many (2,3)-bodies charmless  $B$  decays
- ❑ Less particles in the final state  $\rightarrow$  more efficient trigger and reconstruction ☺

Examples of contributing and interfering diagrams (more in backup)

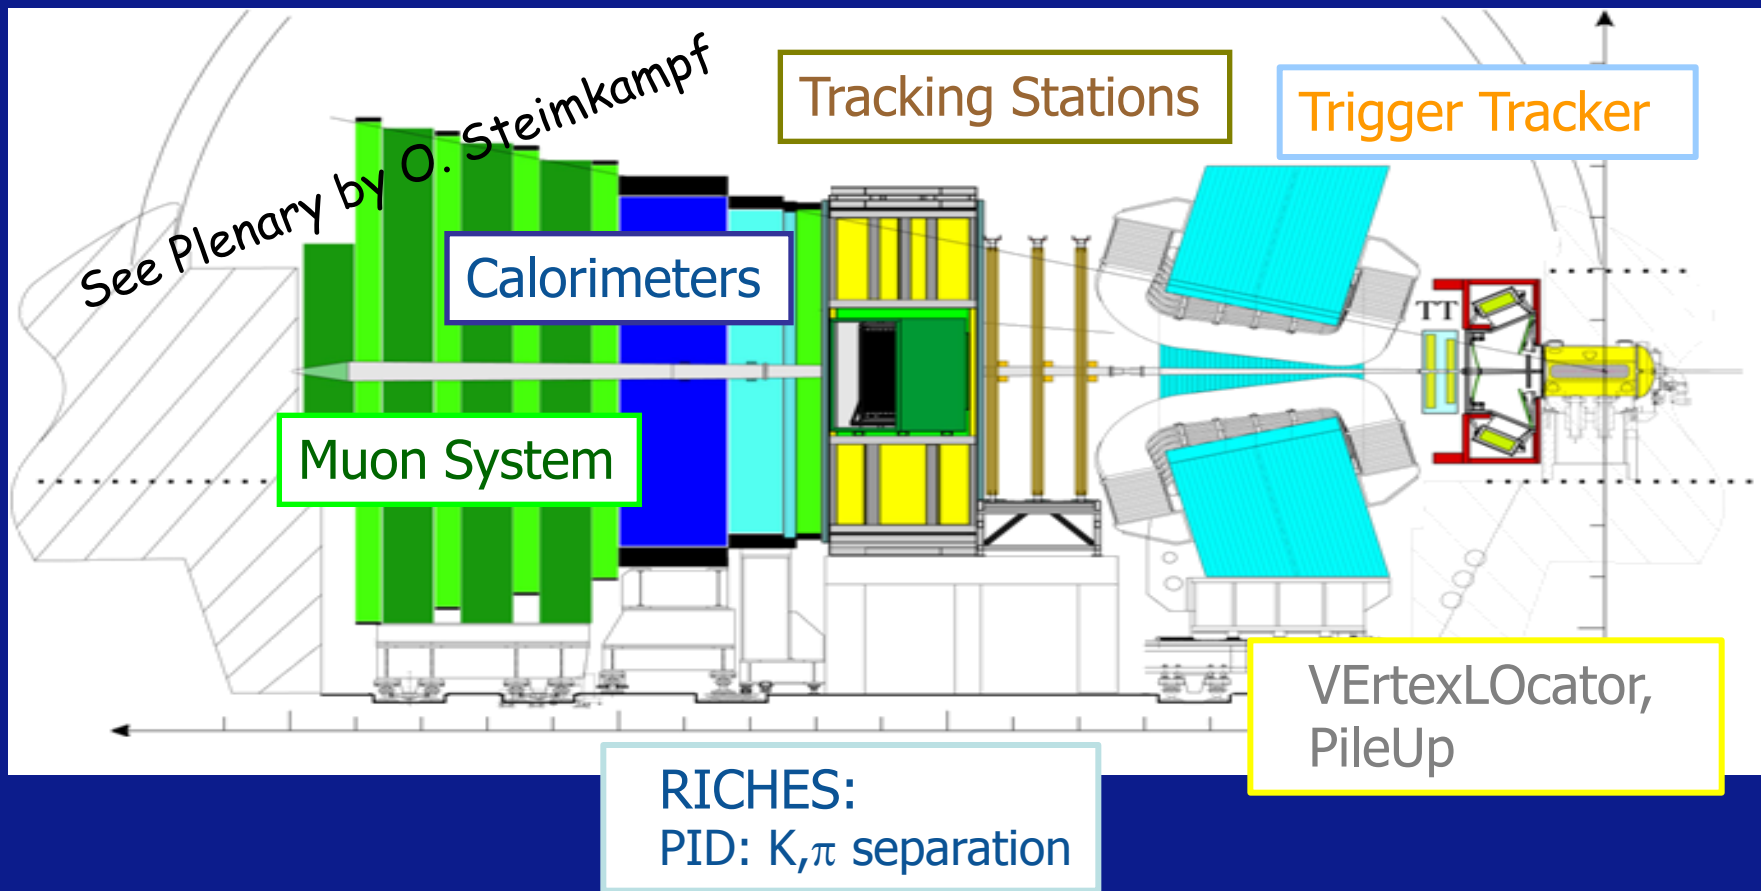

Decay mode	Contributing diagrams
$B^0 \rightarrow \pi^+\pi^-$	$T, P, PA, P_{EW}^C, E$
$B^0 \rightarrow K^+\pi^-$	$T, P, P_{EW}^C$
$B_s^0 \rightarrow \pi^+K^-$	$T, P, P_{EW}^C$
$B_s^0 \rightarrow K^+K^-$	$T, P, PA, P_{EW}^C, E$
$B^0 \rightarrow K^+K^-$	$PA, E$
$B_s^0 \rightarrow \pi^+\pi^-$	$PA, E$

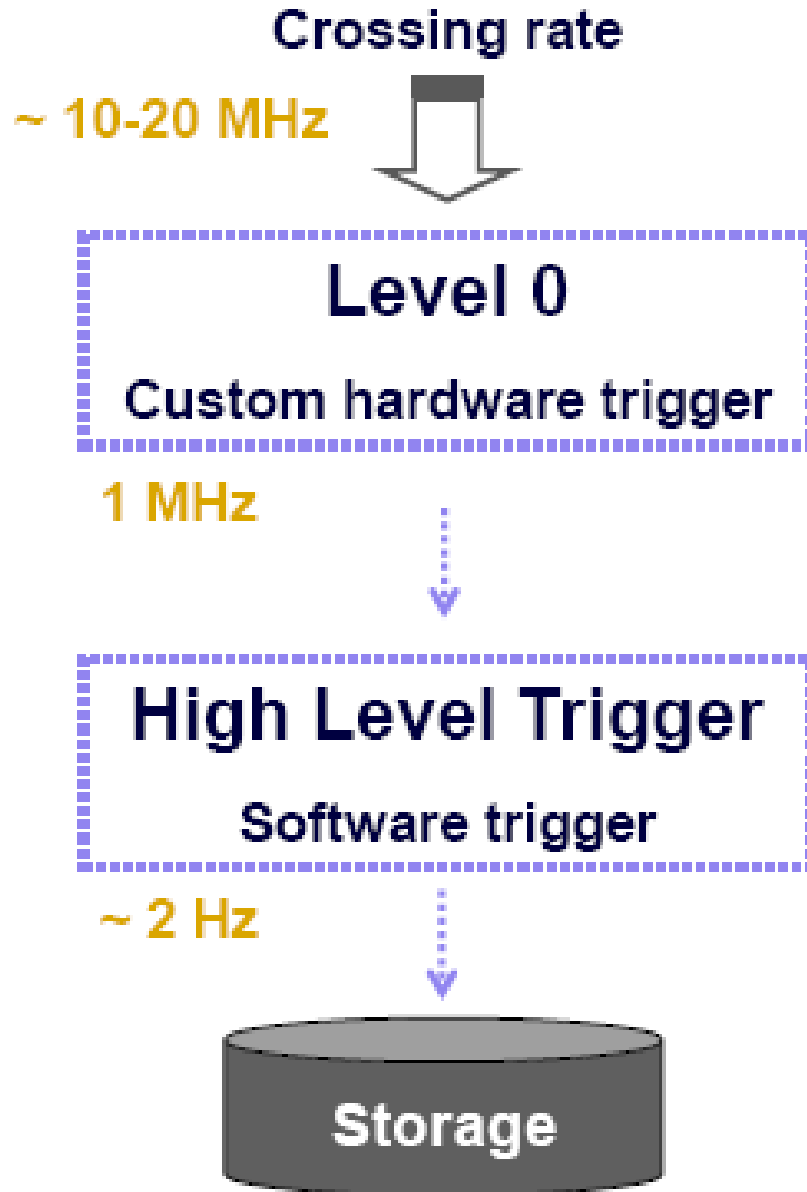

BR  $10^{-6} \rightarrow 10^{-5}$

Upper limits  $10^{-6}$

The Challenge: precise rare decays and time-dependent CP asymmetries in a high background environment.

*Needs excellent vertexing,  $p$  reconstruction, particle-ID*

The bottleneck :

- Bandwidth and rate limitations
- Already high (3.6 GeV)  $E_T$  hadronic triggers

HLT1 :

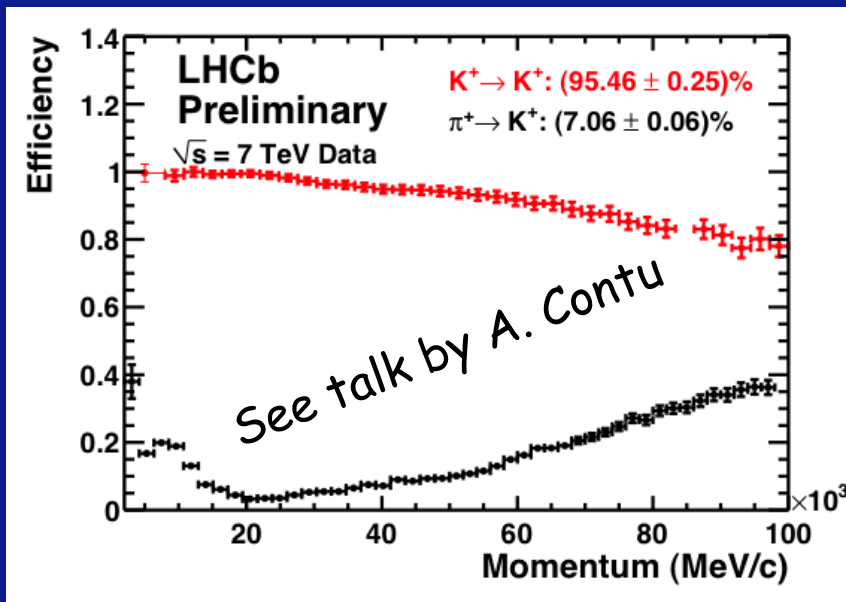

- Build a 'good' track from any L0  
→ Recover some efficiency for hadronic triggers

HLT2 :

- Inclusive Topological Trigger :
- Build a B using 2,3,4 tracks
  - Compensate for missing  $p_T$

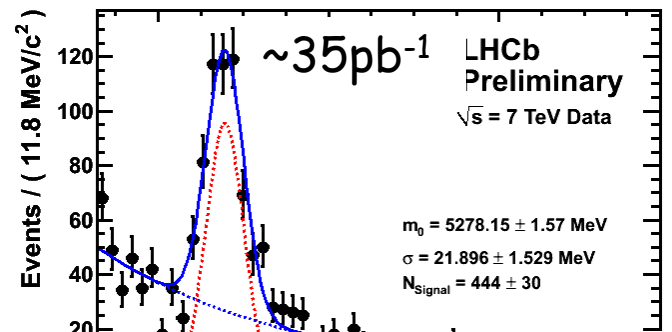

Hadronic B decays  $\rightarrow$  intensive use of PID in any analysis

Performance is close to MC expectations

Lifetime and Tagging performance studies also under progress

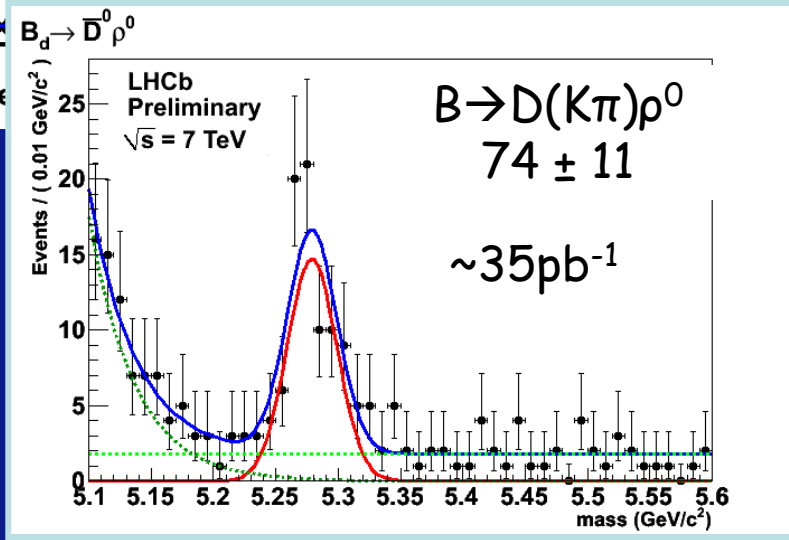

Clean hadronic B signals observed reasonably in agreement with expectations

Wait for full 2010 run reprocessing to observe  $B \rightarrow DK$  with  $D \rightarrow KK$

First observation of pure colour suppressed hadronic B decays in a hadron collider (?)

Expect 15 to 50  $B_s \rightarrow D^0 K^{*0}$  in the full 2010 reprocessing

DK	$A_{CP+}$
BaBar	$0.25 \pm 0.06 \pm 0.02$
CDF	$0.39 \pm 0.17 \pm 0.04$
DK	$A_{ADS}$
Belle	$-0.39 \pm 0.26^{+0.06}_{-0.04}$
CDF	$-0.63 \pm 0.40 \pm 0.23$

Current status on the measurement of asymmetries

$$A_{ADS} = \frac{\Gamma(B^- \rightarrow D(K^+\pi^-)K^-) - \Gamma(B^+ \rightarrow D(K^-\pi^+)K^+)}{\Gamma(B^- \rightarrow D(K^+\pi^-)K^-) + \Gamma(B^+ \rightarrow D(K^-\pi^+)K^+)}$$

$$= \frac{2r_B r_D \sin(\delta_B + \delta_{K\pi}) \sin \gamma}{r_B^2 + r_D^2 + 2r_B r_D \cos(\delta_B + \delta_{K\pi}) \cos \gamma}, \quad \text{ADS}$$

LHCb  $1\text{fb}^{-1}$   
@  $\sqrt{s}=7\text{TeV}$  :

Competitive measurements with current dominating measurements

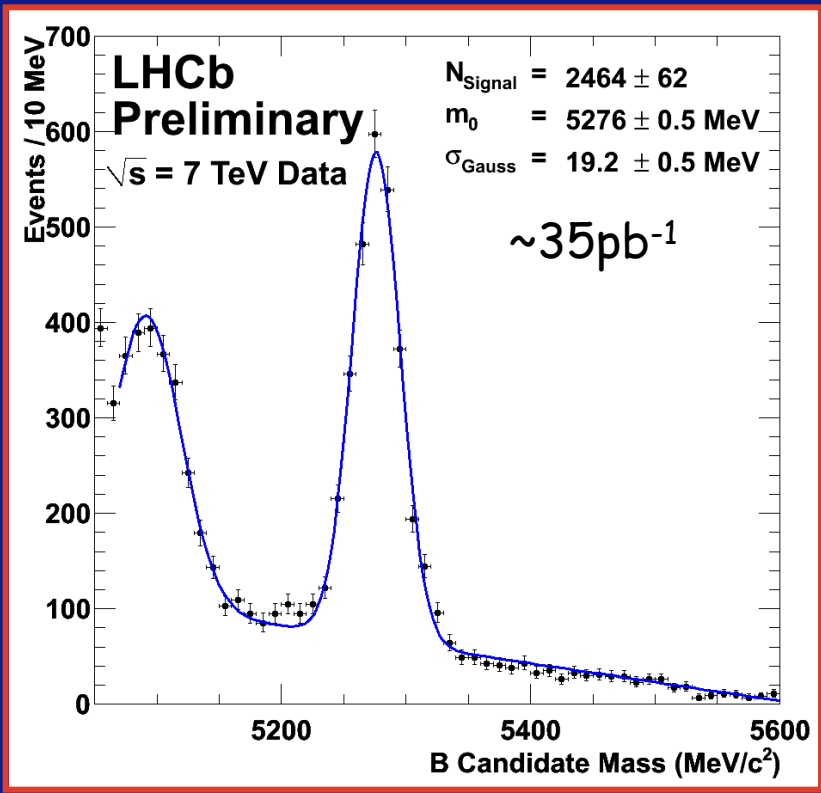

*possible* first results from LHCb @ Winter 2011 conferences :

- $A_{CP+}$  and  $R_{CP+}$  competing with CDF
- ratios of  $\text{BR}(B \rightarrow DK)/\text{BR}(B \rightarrow D\pi)$
- First observation of  $B_s \rightarrow D^0 K^{*0}$  and  $\text{BR}(B_s \rightarrow D^0 K^{*0})/\text{BR}(B_d \rightarrow D^0 \rho^0)$

$\sim 15^\circ$  LHCb combined sensitivity on time integrated  $\gamma$  in 2011

Arxiv:1007.0504, PRD 81, 031105(R)(2010)  
+ preliminary results @ CKM 2010

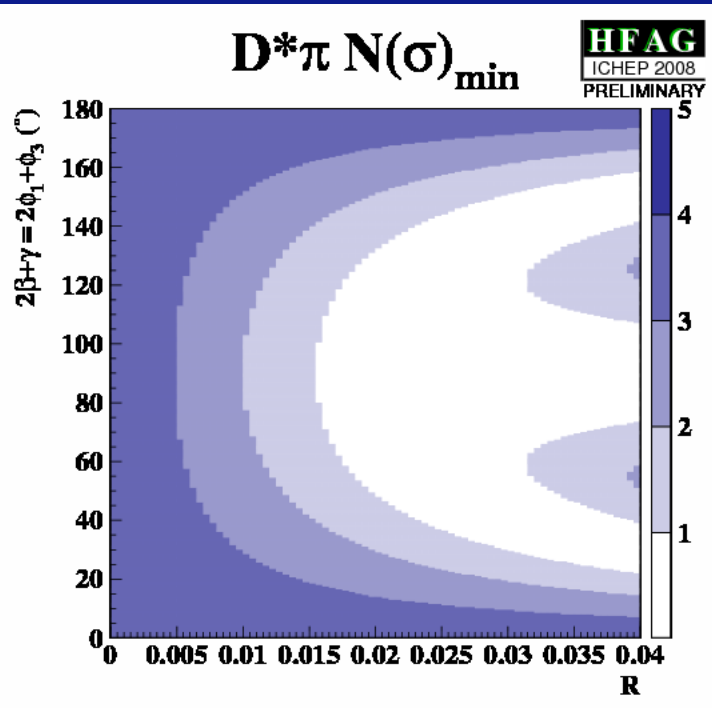

$B^+ \rightarrow D^0 \pi \pi \pi$  &  $B^0 \rightarrow D^+ \pi \pi \pi$

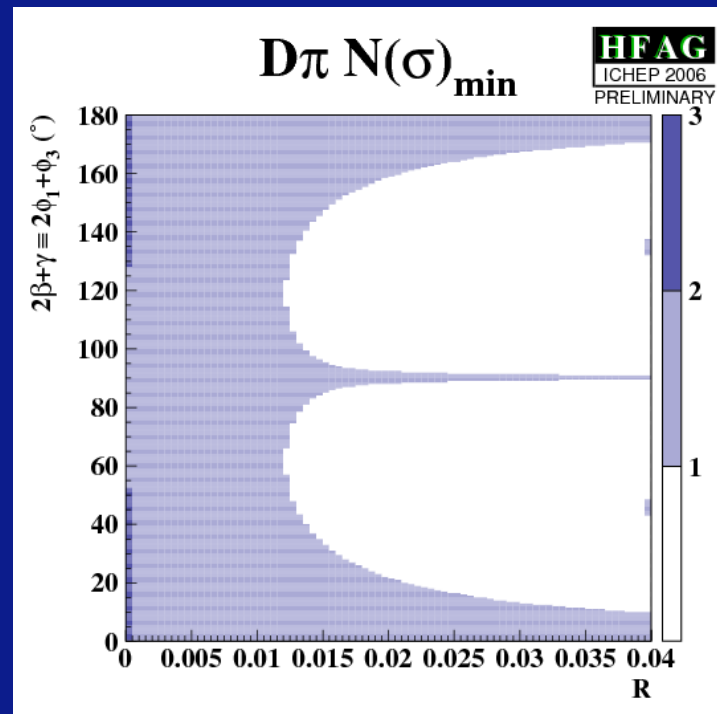

Six body final states observed !

$B_s \rightarrow D_s(\Phi\pi)\pi$

$B_s \rightarrow D_s \pi \pi \pi$  also seen

B factories  
legacy

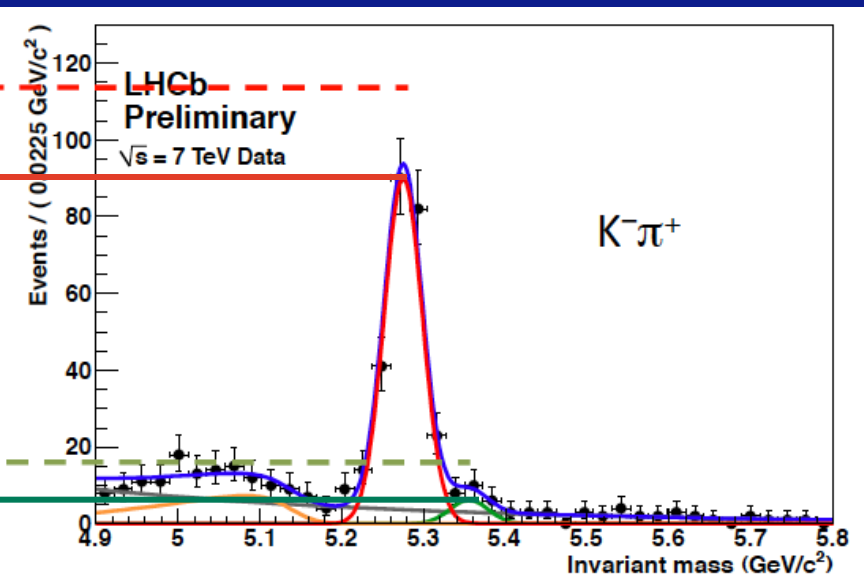

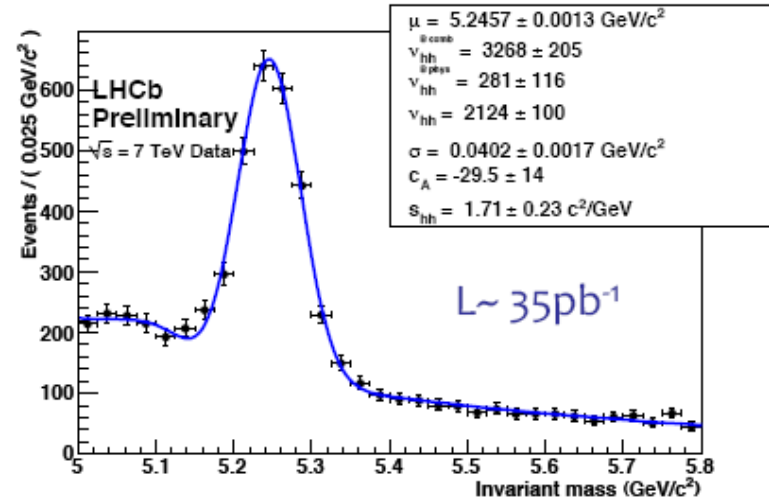

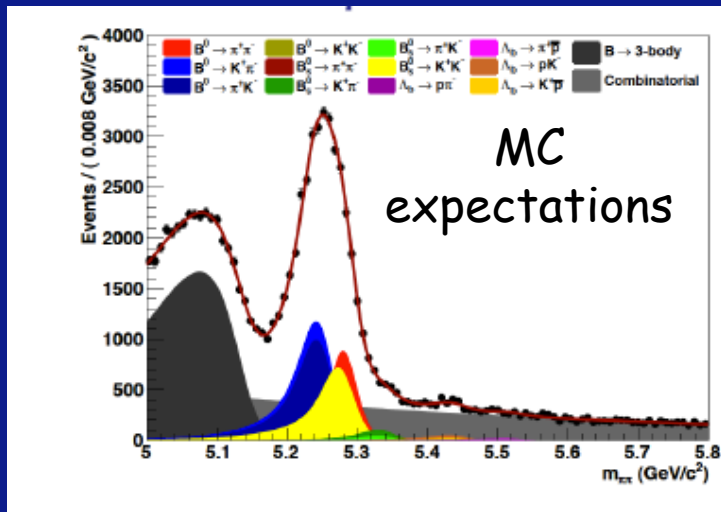

*possible* first results from LHCb @ Winter 2011 conferences :

- Measurements of ratio of  $BR(B^0 \rightarrow DK)/BR(B^0 \rightarrow D\pi)$
- Upper limits on  $B_s \rightarrow D(K, \pi)$
- First observations of  $D_{(s)}(K\pi\pi)$  and best measurements of  $D_{(s)}(\pi\pi\pi)$
- $f_d/f_s$  from  $N(B^0 \rightarrow DK)/N(B_s \rightarrow D_s\pi)$

$\sim 15^\circ$  statistical sensitivity on time dependent  $\gamma$  in 2011

Fleischer, Serra, Tuning [Arxiv:1004.3982v3]  
<http://www.slac.stanford.edu/xorg/hfag/>

Raw asymmetries already visible by eye !  $\rightarrow$  work ongoing on proper estimates

	$B^0 \rightarrow K\pi$
PDG10Aver.	$-0.098 \pm 0.013$
CDF	$-0.086 \pm 0.023 \pm 0.009$
	$B_s \rightarrow K\pi$
CDF	$0.39 \pm 0.15 \pm 0.08$

*possible* first results from LHCb @ Moriond 2011 :

- Measurement of  $BR(B_s \rightarrow K\pi)/BR(B_d \rightarrow K\pi)$
- $A_{CP}$  measurements competitive with CDF results

$\sim 15^\circ$  sensitivity on  $\gamma$  loops for LHCb by fall 2011

CDF, [N PB (Proc. Suppl.) 170 (2007) 39-45]  
<http://www.slac.stanford.edu/xorg/hfag/>

- LHCb is performing well and is already able to observe hadronic B decays
  - $10^{-5}$  and  $10^{-6}$  hadronic decays are observed or about to be so
    - Discoveries of new expected  $B_s$  decay modes hopefully for Winter conf.
  - Raw asymmetries observed in some channels
    - Hopefully calibrated by Winter conf. to produce first CPV results

LHCb will be competitive with CDF results

- Wait for even more exciting data taking periods in 2011
  - $\gamma$  sensitivity is going to be of the order of  $15^\circ$  in loops AND trees
  - $\gamma$  sensitivity of  $15^\circ$  both in time independent AND time dependent trees
    - Competitive with existing measurements

LHCb will improve our knowledge on  $\gamma$  by the end of 2011

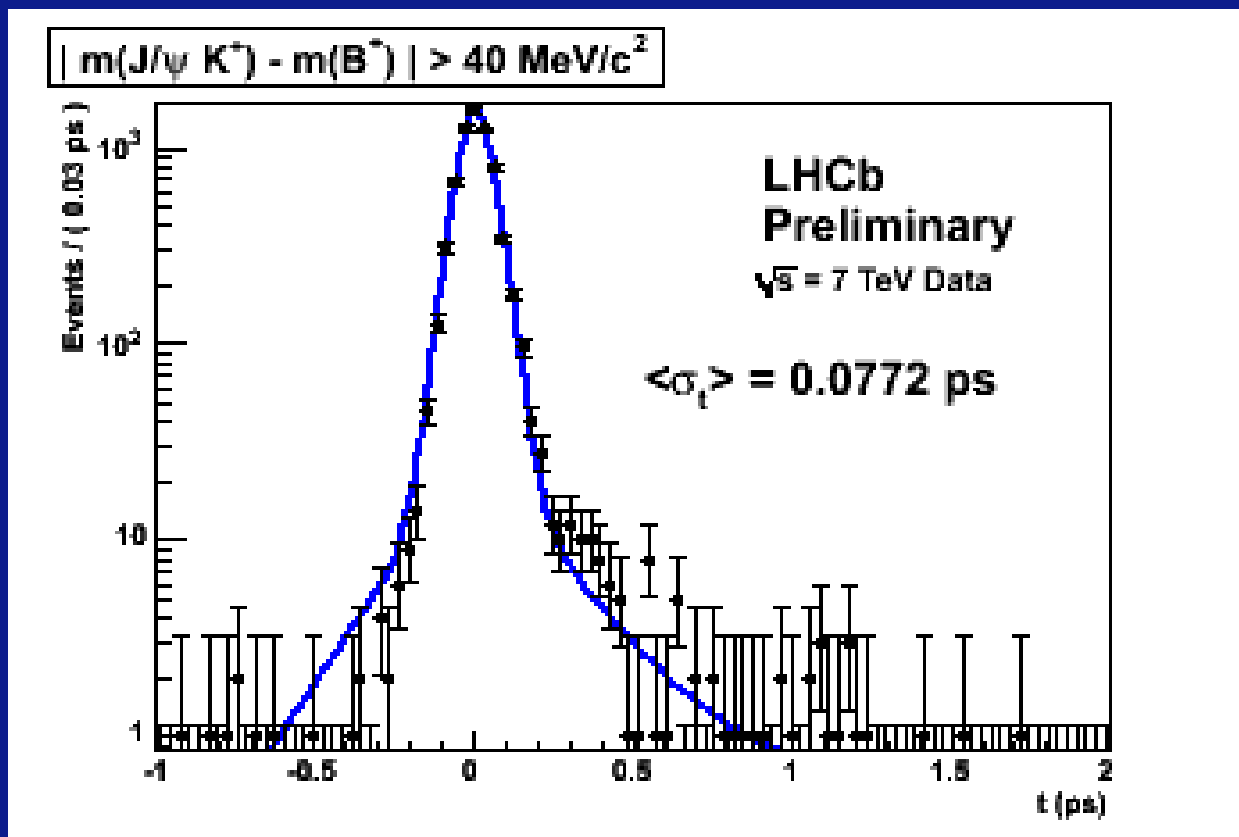

Have fun : find the 4 PV's !

## LHCb Event Display

3.10. 2010 16:11:33  
Run 80167 Event 349297607 bId 225

- Lifetime and Tagging are key ingredients for time dependent and  $B \rightarrow hh$

Lifetime resolution of 77fs (worse than expected)  
Recent improvements obtained

Tagging performance studies under progress
